

MCPS BLOODBORNE PATHOGEN TRAINING TEST

(Please print this test, answer the questions and return it to your school nurse when completed.)

Employee Name _____

Date _____ School/Work Site _____

True or False

- ___ 1. Bloodborne pathogens are germs that are found in the bloodstream and can cause disease in humans.
- ___ 2. Common bloodborne diseases include Hepatitis B, Hepatitis C and HIV (AIDS).
- ___ 3. There are vaccines available to prevent Hepatitis C and HIV.
- ___ 4. Universal precautions are practices and procedures that help prevent the transmission of bloodborne pathogens.
- ___ 5. Bloodborne pathogens are only found in blood and not other body fluids.
- ___ 6. Handwashing is the best way to prevent the spread of infections.
- ___ 7. Disposable gloves should be used when providing first aid or when coming in contact with any blood or other potentially infectious materials.
- ___ 8. If a child has a bloody nose, the most important first step in treating them is to get them to the nurse's health office as soon as possible.
- ___ 9. Blood and body fluid spills should be cleaned and disinfected by the custodian.
- ___ 10. The MCPS Bloodborne Pathogens Exposure Control Plan is available in every school office and school health office.
- ___ 11. You only need to wash your hands after wearing gloves when providing first aid if there was a tear or break in the glove.
- ___ 12. Students should be encouraged to wash their own wounds with soap and water.
- ___ 13. When exposed to a potentially infectious body fluid, employees should only report the incident if they are concerned.
- ___ 14. Any staff member whose position puts them at increased risk for bloodborne pathogen exposure may request the Hepatitis B vaccine series.
- ___ 15. Human bites that break the skin and cause bleeding can transmit a bloodborne pathogen.
